

Rethink cyber-attack protection

Re-Sec brings the most comprehensive and powerful sanitization solution right to the fingertips of the end user. Our patented solution offers a modular and scalable approach and provides varying levels of security that can be tailored to meet the exact needs of your organization. Now you can identify and neutralize threats in real time, before they get a chance to infiltrate and attack your organization's network.

Re-Sec was founded in 2011 by a highly experienced IT Security team who realized security systems lacked an essential comprehensive turnkey solution. Re-Sec developed the revolutionary ReZone platform, which adds a new layer of security for enterprises, protecting against Zero-Day attacks, Advanced Persistent Threats and targeted attacks.

The Re-Sec solution creates enclosed and separate ecosystems for internal and external applications. The platform combines a unique signature-free protection mechanism with an enhanced signature based detection to create a near perfect protection for the enterprise's environment.

The Re-Sec solution is based around a unique patented technology, which allows us to easily deploy and deliver the strongest security measures available today to every user in the organization. Re-Sec's innovative technology is used by high profile organizations in the financial, military and infrastructure sectors.

RE-SEC Redefining Security

Reinforce entryways with an all-in-one solution

Finally, a comprehensive sanitization solution that provides powerful multi-scanning, behavioral analysis and forensics like never before, including: Multi-scanning using signature and non-signature based malware detection engines, file format verification techniques, threat neutralization by a set of built-in conversion tools, complete system hardening, a built-in archive processing engine, and our unique repeat scan technique.

Regain control from one single “brain”

The advantage of the Re-Sec solution is that it is controlled from a single easy to manage smart platform. Our platform enables a uniform policy for each user across every single entry point in your organization.

Reduce time and costs - increase flexibility

Re-Sec's non-intrusive out of the box solution can be provided as a HyperV / ESXi virtual appliance. The platform can integrate with multiple data entry points such as: Gateways, Vaults, e-mail, end users and more. Installation is fast and seamless and can actually be installed overnight. The platform is highly dynamic and can be continuously adjusted to the organization's changing needs.

Relieve your system of complex interfaces

The Re-Sec solution provides an intuitive management system that integrates into existing management tools in the organization, enabling end-users to utilize the system without any special training. The sanitized file being sent directly to the user and a complete report sent back to the relevant department in the organization.

Research and identify the nature of threats

Re-Sec's solution allows your security team to perform deep forensic analysis of cyber attacks and provides advanced tools such as comprehensive sandbox analysis and detailed reports about past activities.

ReZone - The Ultimate Solution

ReZone is the “brain” that provides a central policy enforcement on a set of advanced plug-in agents from a single point of management. Among the agents we offer are:

- ReZone Scan Portal – a “kiosk” that allows users to safely import and export data. Can be deployed as a hardened Thin Client appliance or on dedicated PCs.
- ReZone Scan Agent – These endpoint agents offer all the security benefits of the ReZone platform and can be deployed directly on selected end-users' computers. Sanitized files can be sent back to the user's desktop, thus simplifying the process.
- ReZone Mail – Monitors incoming emails. Each message passes a security sanitization process and only then sent to the recipient.
- ReZone File Scanner – Monitors specific locations and automatically sanitizes any new or modified file. Sanitized files are sent to predetermined locations.
- ReZone FTP Scanner – Interacts with FTP servers and provides a secure FTP proxy.
- ReZone Vault Scanner – Integrates with different digital vault solutions and allows policy enforcement and sanitization.
- ReZone Web Scanner – Monitors incoming web content. Each downloaded file passes through a security check before being sent to the recipient.
