

## Malware prevention that won't stop you from getting your work done.

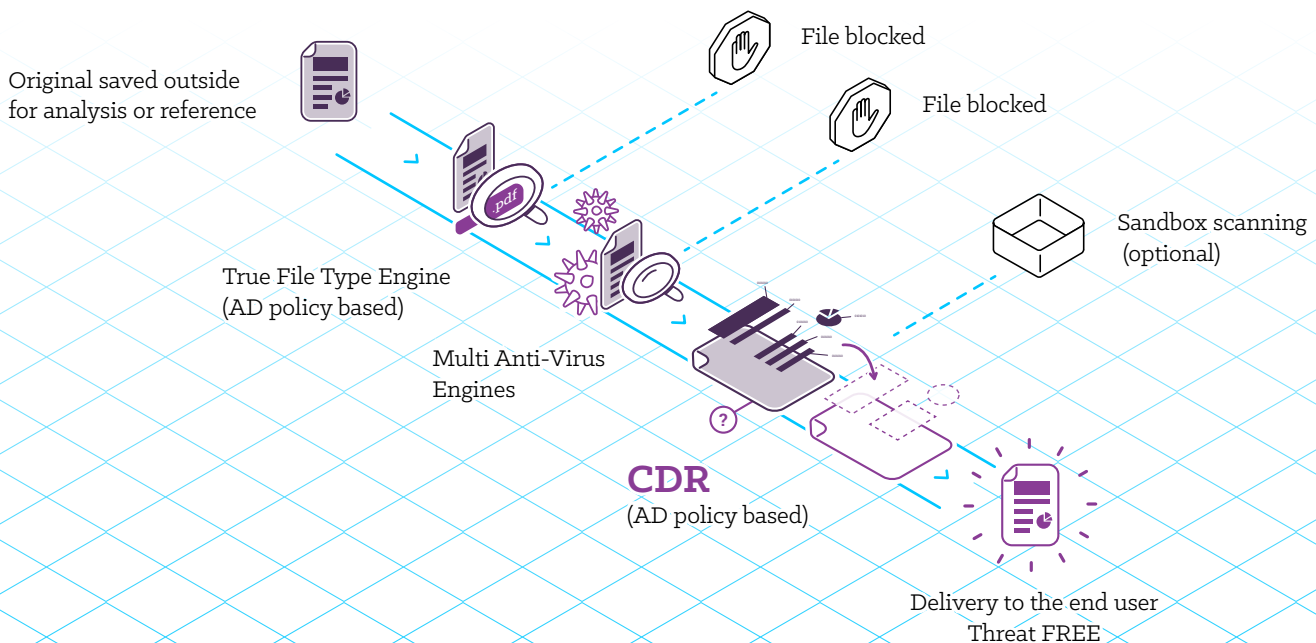

The **ReSecure Platform** contains 3 layers of scanning to fully protect your network from known and unknown malware:

**True File Type** - Checks file structure to identify actual file type; blocks masked files and files disallowed by policy

**Multi Anti-Virus** - Scans each file with multiple best of breed anti-virus engines to ensure all known malware is blocked

**Content Disarm and Reconstruction (CDR)** - Processes all files, analyzes the content structure, and rebuilds a duplicate file of same type without loss of functionality.

- ✓ Prevents known and unknown / zero-day malware from penetrating the network
- ✓ Delivers clean and safe content to end users in real time
- ✓ Protects the organization 360-degrees including email, devices and endpoints, file transfer, and web downloads
- ✓ Fully transparent experience for end users
- ✓ Customizable according to group level policies
- ✓ Low IT resource requirements, easy to maintain
- ✓ Advanced monitoring system and flexible reporting

## Product Benefits

- ✔ Prevents known and unknown threats without requiring frequent system or database updates
- ✔ Policy based platform allows IT to enforce policy per user or group of users via Active Directory
- ✔ Transparent to employees and end-users
- ✔ Low latency and no interruption to work flow
- ✔ Highly scalable with dynamic load balancing
- ✔ Easy deployment as on-premise or cloud solution
- ✔ Integration with best of breed systems and management consoles
- ✔ Detailed reporting of files blocked and exceptions for easy ROI analysis

## ReSecure Engine Specification & Performance

### Server Specification

8 Cores  
8 GB RAM (Recommended)  
300GB disk space  
Windows Server 2008R2 or above  
.NET 4.5

### Performance - 4 Cores / 4GB

#### Memory

Up to 10,000 emails /Hour  
Up to 10GB Data/Hour

### Architecture

Dynamic Cluster

### True File Type Engine

Over 300 file types

### Anti Virus Engine

5-8 best of breed

### CDR Engine File Type

Office 2007- 2016, Office 2003,  
OpenOffice, Visio, PDF, HTML,  
Images, Archives

## 360-degree Prevention

### Mail

Deliver trusted and secure emails and attachments for on-premise email and cloud email services

### Web

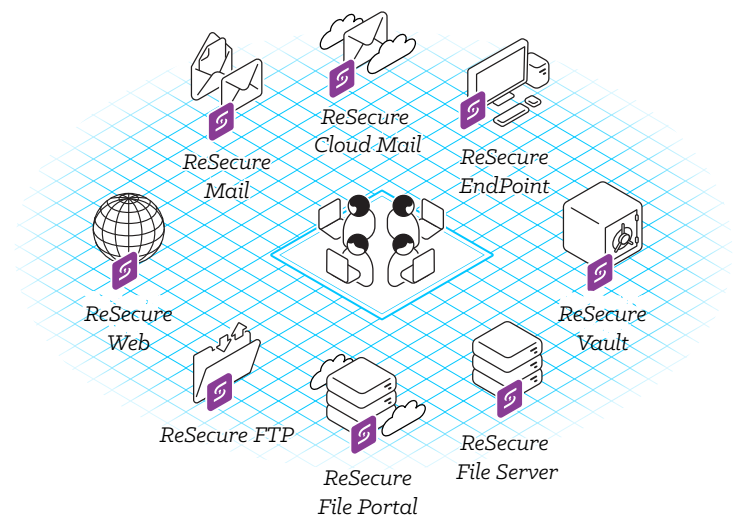

Block malware penetration via internet downloads and web content

### Devices

Neutralize malicious files located on external drives, memory sticks and mobile phones

### File Transfer

Prevent infiltration of malware from files stored on FTP and file servers and digital vaults

## About ReSec

**ReSec Technologies** develops innovative enterprise-grade solutions to prevent malware penetration of networks, endpoints, and data centers. Established in 2012 by military cyber defense experts, **ReSec** introduced **Content Disarm and Reconstruction (CDR)** technology to overcome the limitations of conventional anti-malware detection methods. **ReSec** products and solutions are used by dozens of leading brands across major industries including banking and finance, manufacturing, telecom, healthcare and the public sector.

## Integration with Best of Breed Systems

The ReSecure platform can be integrated with existing network elements and complimentary security solutions (e.g., mail gateways, anti-spam, sandboxing), and can manage 3rd party solutions as part of an integrated platform.
